

DURAIo

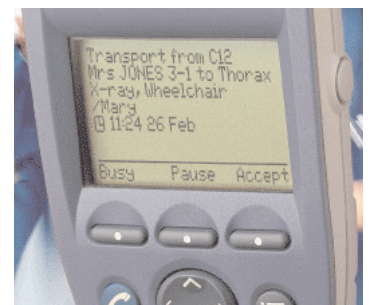

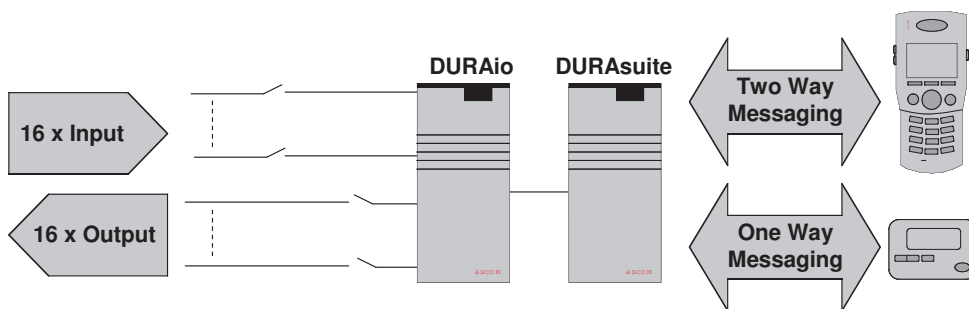

Alarm Input and Output Module

DURAIo provides DURAsuite with the ability to receive alarm signals from systems via “dry contacts” and to use these alarm inputs as triggers to dispatch pre-defined alarm messages to any receiving device.

DURAIo also enables DURAsuite to control external equipment (e.g. electric doors and lights) and management systems by changing the state of specific output contacts.

Features:

- > Each DURAIo module simultaneously supports...
 - 16 polarity independent inputs
 - 16 outputs - voltage free or voltage applied
- > Multiple states
 - Open, closed and toggle
- > Ability to network upto 16 DURAIo modules
- > Resilient appliance - no moving parts
- > Inactivity timeout messages
- > Logging of all message and alarm activity
- > No software installations required - fully web based
- > Configurable from DURAsuite management screen
